# A07 - Crafting Reports

#### Srishti Mutha

### Spring 2023

# Contents

Objectives:	1
Directions	1
Task 1 - Basic Markdown	1
Task 2 - Import packages and data, suppressing messages $\ \ldots \ \ldots \ \ldots \ \ldots \ \ldots$	2
Task 3: Creating tables	2
Task 3: Plots	4
Task 4: Knit and submit.	
Git Repository	-

# **Objectives:**

- 1. More practice with R code chunk options
- 2. Gain proficiency with figures, tables (w/Kable) table of contents, etc.
- 3. Debugging knitting issues

#### **Directions**

- 1. Rename this file <FirstLast>\_A07\_CraftingReports.Rmd (replacing <FirstLast> with your first and last name).
- 2. Change "Student Name" on line 3 (above) with your name.
- 3. Work through the tasks, **creating code and output** that fulfill each instruction.
- 4. Be sure your code is tidy; use line breaks to ensure your code fits in the knitted output.
- 5. Be sure to **answer the questions** in this assignment document.
- 6. When you have completed the assignment, **Knit** the text and code into a single PDF file.
- 7. Be sure that you also commit and push your final Rmd document to your GitHub account.

#### Task 1 - Basic Markdown

Create a table below summarizing the metadata of the EPA Air Quality data. The first column will be the metadata attribute item name: "Source", "Date", and "Filename". And the second column will include the metadata values: "EPA Air Quality SYstem (AQS)", "2018-2019", and "EPAair\_O3\_PM25\_NC1819\_Processed.csv". The first column should be aligned to the right and the second to the left.

```
#Import libraries
library(tidyverse); library(lubridate); library(here); library(knitr)
## -- Attaching packages ------ tidyverse 1.3.2 --
## v ggplot2 3.4.1
                     v purrr
                               1.0.1
## v tibble 3.1.8
                     v dplyr
                              1.1.0
## v tidyr
          1.3.0
                     v stringr 1.5.0
## v readr

##
##
## The following objects are masked from 'package:base':
##
##
      date, intersect, setdiff, union
##
##
## here() starts at /Users/cherry/Desktop/EDA/EDA-Spring2023
epa_metadata <- data.frame(c("Source", "Date", "Filename"),</pre>
                     c("EPA Air Quality SYstem (AQS)", "2018-2019", "EPAair_03_PM25_NC1819_Processed.
colnames(epa metadata) <- c("Attribute", "Value")</pre>
kable(epa_metadata,
     align = "rl")
```

Attribute	Value
Source	EPA Air Quality SYstem (AQS)
Date	2018-2019
Filename	EPAair_O3_PM25_NC1819_Processed.csv

### Task 2 - Import packages and data, suppressing messages

Set the following R code chunk so that it runs when knit, but no messages, errors, or any output is shown. The code itself should be displayed.

```
#Import EPA data (from the processed_KEY folder) & fix dates
epa_data <- read.csv(
  here("data","processed_KEY","EPAair_03_PM25_NC1819_Processed.csv"),
  stringsAsFactors = TRUE) %>%
  mutate(Date = ymd(Date))
```

#### Task 3: Creating tables

Set the following R code chunk to display two tables, using knitr's kable() function, one listing the mean PM2.5 concentrations for each county, and the other the same except for Ozone. The titles should be "Mean

Particulates (2.5mm)" and "Mean Ozone", respectively. And the column names should be "County" and " $\mu g/m3$ " for both tables.

Customize the chunk options such that the code is run but is not displayed in the knitted document. The output, however, should be displayed.

## TIPS:

- Use " $\$  as a column name to generate a nicely formatted string via mark-down/MathJax notation
- If your output table spans across two pages, try inserting a new line (via \newpage) in the markdown just before your code chunk.

Table 2: Mean Ozone

Avery 38.39308 Wake 38.61345 New Hanover 39.11688 Edgecombe 39.22154 Johnston 40.33849 Mecklenburg 40.45746 Durham 40.69882 Pitt 41.64147 Forsyth 44.02352

Durham	33.53770
Mecklenburg	33.63038
Forsyth	35.09282
Wake	37.45423

# Task 3: Plots

Create two separate code chunks that create boxplots of the distribution of Ozone levels by month using, one for only records collected in 2018 and one for records in 2019. Customize the chunk options such that the final figures are displayed but not the code used to generate the figures. In addition, the plots aligned on the left side of the page and set the figure heights so both plots fit on the same page with minimal space remaining. Lastly, add a fig.cap chunk option to add a caption (title) to your plot that will display underneath the figure.

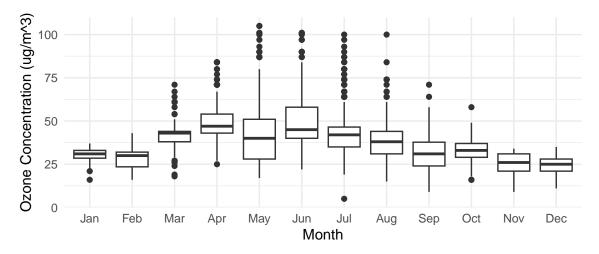

Figure 1: Ozone levels by month across 2018

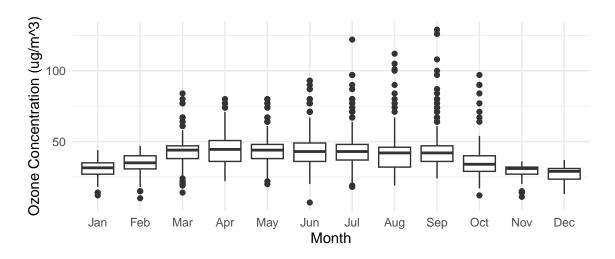

Figure 2: Ozone levels by month across 2018

# Task 4: Knit and submit.

Add a table of contents to your document and knit to a PDF. Submit your PDF to Sakai, but also be sure to commit and push your Rmd file used to create this knit document to GitHub. In the section below, add a link to your GitHub repository.
